13%

LEVEL 4
Close Collaboration
Onsite with Some
System Integration

0%

LEVEL 5
Close Collaboration
Approaching an
Integrated Practice

58%

Takeaway Points

1

Respondents expressed that integrated care is a high priority for their sites to provide higher quality patient care and ease staff workloads.

2

Respondents cited location space, ability to hire (and retain staff), insufficient reimbursement rates, and limited evidence-based research as barriers to implementing integrated behavioral health.

3

Continued education for primary care clinicians on the primary care behavioral health integration model, streamlined access to referral services (e.g., Regional Center), and improved EMR communication could boost integration levels.
